

Summer Village of Seba Beach Installs Electric Vehicle Charging Stations

Posted on November 2, 2022

The Summer Village of Seba Beach recently installed two dual-connector Level 2 chargers at the municipal building located at 140-3rd St. The chargers are anticipated to serve tourists as well as our own community members who own or may be considering switching to electric vehicles. “With the increase of electric vehicles being driven in Canada, the Summer Village of Seba Beach is thrilled to be one of the first communities in the area to offer electric vehicle charging stations for residents and visitors,”

said Rick MacPhee, Mayor for the Summer Village of Seba Beach.

Seba Beach, located west of Edmonton, is a small, tight knit village with a large cabin-going community in the summertime. While their cars are charging, visitors can enjoy multiple activities the village has to offer, including visiting the Heritage Museum or library, taking a stroll on the pier, playing a game of miniature golf, enjoying one of the many restaurants, and of course, enjoying the lake and beach. We anticipate that these chargers support visitors from all over Alberta.

The electric vehicle charging stations were generously funded by the Alberta Municipal Climate Change Action Centre (MCCAC) and are available for public use. Special thanks to the Members of Council for the Summer Village of Seba Beach, Rick MacPhee, Allan Aubry and Neil Fleming, who championed this project and to Sustainable Projects Group (SPG) who supported the installation and funding application for the chargers.
